Site map and location of trees

Specification of work

Tree no.	Species	Specification of work	Justification
T1.	Poplar	Dismantle and remove to ground level. Grind out stump to remove the main root ball.	The the is dead and host a fungal bracket (Rigidoporus ulmarius) at the base. This will lead to decay and likely hollowing of the main stem. The tree should therefore be removed on the grounds of safety to users of the area.
T2.	Walnut	Remove deadwood from the crown up to 20mm in diameter.	The tree is situated in prominent area of the garden with a high frequency of people using the grass area beneath the tree. The removal of deadwood is proposed on the grounds of safety to users of the area.
