The sycamore to the rear of site is growing into a neighbour's garden and causing damage to the fence. Due to the location of the tree, it is advised that it is removed to allow for fence repair. Our certified team will attend site and access the tree using ropes and harness. Branches will be individually pruned and lowered into a segregated drop zone using LOLER certified rigging equipment. The entire crown will be dismantled and then the stem will be sectionally felled. The remaining stump will be treated with Eco plugs to prevent regrowth. All waste will be processed through a woodchipper and removed from site for suitable disposal.
