LEGEND TO TREE SURVEY FORM

Tree number/Tag	Numbered tag fixed to tree or given number on plan where no tag has been used. Given number for groups (G), hedges (H) or shrubs (S). Individual trees will have no tag if located on adjoining land or inaccessible Note: Tags are only used occasionally, to draw attention to a particular tree or trees when they might otherwise be difficult to locate on the ground without a number physically attached to them
Species	Tree species - Common name or botanical name if no common name is in common use
Tree height	Height in metres where measurement is possible using a laser clinometer. Estimated where tree is inaccessible or where it is not possible to see the top and bottom of the tree simultaneously to take a measurement
Stem Dia(s)	Trunk diameter measured at 1.5 metres above ground level (on the side of the tree where the ground is highest). Where there are multiple stems, measurements are made for each stem
RPA radius	Root Protection Area radius in metres (linear) measured from centre of tree trunk. Formulae apply to multiple stemmed trees with up to 5 stems and trees with more than 5 stems. NOTE: For single stemmed trees the RPA is 12 x trunk diameter up to a maximum of 15 metres. For 'veteran' trees the RPA can be greater than 15 metres
RPA m^2	Root Protection Area in square metres. Formulae apply to multiple stemmed trees with up to 5 stems and trees with more than 5 stems. NOTE: For single stemmed trees the RPA is 12 x trunk diameter up to a maximum of 707 $metres^2$. For 'veteran' trees the RPA can be greater than 707 $metres^2$
Crown spread	Spread of tree crown (branches) in metres at each cardinal point (NESW) measured from tree trunk using a laser rangefinder. Estimated where inaccessible
1st large branch height above ground	The height in metres on the tree of the lowest major branch and its direction (where relevant)
Canopy height above ground	Headroom - The height above ground in metres of the lowest part of the tree crown / branch ends (where relevant)
Life stage	The estimated stage of life of the tree in relation to its species. e.g. A Silver Birch may be considered 'mature' at 40 years, but Oak may be considered to be in early maturity at the same chronological age.
Observations; structural / physiological condition and any preliminary recommendations	The condition of the tree in relation to the presence of any notable structural defects or ill-health and any recommendations that may be relevant to good arboricultural management or in relation to a proposed development Note: Sometimes defects in trees such as cavities and splits can be viewed as beneficial because of their ecological value, especially on 'veteran' trees
Estimated remaining contribution	An estimated range of the minimum number of years a tree may make a positive contribution before it falls into decline (senescence). This is recorded as <10 years, 10+ years, 20+ years or 40+ years
Category & Sub-category	A qualitative grading. See Table 1 (page 9) of BS5837:2012

Site name: 6 Tunkers Lane, Bury, Ramsey PE26 2NP Surveyor: Ian Lorman	Date of survey: 18th January 2025 Conditions: Clear / dry / still	ARGENTA TREE SURVEYS

Tree number/Tag	Species	Tree height	Stem Dia (s)	RPA Radius / RPA m2	Crown spread	1st large branch height above ground	Canopy height above ground	Life stage	Observations; structural / physiological condition and any preliminary recommendations	Estimated remaining contribution	Category &Sub category
1	Copper Beech	20	750	9.00 254	N 7.5 E 9 S 9 W 7		3	Mature	Trunk bifurcated at 2.5 metres with bark included union Physiological condition - Good ▪ No action	40+	B1
2	Wild Cherry	11	450 500 450	9.71 296	N 4 E 5.5 S 4 W 5		8	Mature	Three stems from ground level. Ivy on lower trunks. Heavily reduced Physiological condition - Moderate ▪ No action	20+	C1
3	Copper Beech	11	425	5.10 82	N 5.5 E 5.5 S 5.5 W 5		5	Mature	Trunk bifurcated at 5 metres with bark included union. Maintained by crown reduction Physiological condition - Good ▪ No action	40+	B1
4	Copper Beech	13	650	7.80 191	N 7 E 7 S 7 W 7.5		4	Mature	Trunk bifurcated at 2 metres with sound union. Maintained by crown reduction Physiological condition - Good ▪ No action	40+	B1
H1	Beech hedge. 1.5 metres in height. Good condition • No action										
H2	Mixed hedge of Cherry Laurel, Holly & Viburnum tinus. 1 metre in height. Good condition • No action										
H3	Hedge of Cherry Laurel. 1.5 metres in height. Good condition • No action
