Subject: Planning Application 25/00138/FUL - Electric Vehicle Charging Point
Date: 16 February 2025 15:39:00

Good afternoon

Planning Application 25/00138/FUL refers.

I live next door to The Crown Inn and have no objection to this application in principle. The application seems carelessly put together with only the homes to the north considered.

2.2 The charging point has a very bright white light which shines all night, even when the pub is closed. Broughton is a conservation area where "darkness" at night is part of its character. The bright white light is now covered with black masking tape to shut off the light. It would be better to inhibit this light, or remove the bulb, as a more permanent solution.

2.6 The application states the hours when the pub is shut. In fact the hours shown are the hours when the pub is open.

2.10 and 4.10 The sections do not show the listed buildings to the south and west of where the light is situated.

The application itself seems rushed and put together in much haste.

In principle, I do not object to the charging point where it is situated.
