Subject: Planning Application Ref 25/00134/HHFUL Proposed Installation of heat pump at 44 Lannesbury Crescent, St Neots PE19 6AF

Importance: High

Categories: [redacted]

Apologies - THIS REPLACES MY EARLIER E MAIL SENT TODAY MONDAY 7TH APRIL AT 15.43

Dear Sir/Madam.

Proposed Installation of heat pump at 44 Lannesbury Crescent, St Neots PE19 6AF.

We live at 42 Lannesbury Crescent.
We have looked at the information you sent to us.
We are concerned about noise levels.

The centre/position of the proposed heat pump is 4.3 metres in from the back corner of the side wall of 44 Lannesbury Crescent. It is on the back wall of the house.
The drive belonging to 44 Lannesbury Crescent runs alongside the sidewall of 44 Lannesbury Crescent to their garage and is approximately 3 metres wide.

The boundary line for my property is therefore approximately 7.3 metres from the centre/position of the proposed heat pump.

The noise levels given appear to be only just under that required for planning permission.
I have looked at the MICROGENERATION INSTALLATION STANDARD: MCS 020. It refers to a description being provided for each assessment position tested (address/map/location/door/window/ sketch/photo).
The information on exact assessment positions does not appear to have been provided? I would like to see them including that for 42 Lannesbury Crescent.
If an assessment was not done for 42 Lannesbury Crescent please explain why not?

I have included the link for MICROGENERATION INSTALLATION STANDARD: MCS 020 https://mcscertified.com/wp-content/uploads/2021/10/MCS-020.pdf

Yours faithfully
