| Reasons for comment: | |
| Comments: | Has there been consideration given to any previous planning applications for solar panels being fitted to properties adjacent to the proposed dwellings? On planning application some years ago, I and others were informed that restrictions were in place for these houses / bungalows being in a Conservation Area and how it would spoil the aesthetics to the front of these properties from the highways. Permissions were given to have them installed in the south facing roofline providing there were not visible from the highway. Has this changed? I'm not apposed to them being fitted but, based on previous correspondence with the planning department, it does seem this application has relaxed the planning applications and now allows those who want to have solar panels fitted to their roofs facing North & South to be approved in future applications.<br>Also has consideration been given as to any "glare" being directed into the opposing houses with the bungalows having such low roof line? |

Kind regards
