To: Huntingdon District Council
Planning Department.

Myself and [redacted] recently attended a planning application Ref 24/02093/Tree for 25 Parkside, our usual visit for comments to you on an application.

Whilst looking at this tree and talking to the resident it became clear to us that there may be safety aspects to look at with this tree. The resident has worked in tree conservation previously and we also appreciate conserving our trees is vital. You will see from the tree surgeons report, sent to you direct I believe, that the tree has disease. It is a big old Sycamore, so a beautiful old tree.

I am sending this as a concerned resident, this is close to property and is on *a busy road, many cars and people frequently using* the area.

In view of this could this be looked at as a safety issue, my thoughts and observations are enclosed, I am not an expert but just a little concerned.

Thank you, [redacted]

Tree Application - 25 Parkside, Little Paxton St Neots PE19 6NW - Ref.24/02093/TREE

[redacted] visited this address and talked to the residents. . This tree is on the grass verge outside of the wall of his property.
Both of us, as councillors agree this work needs doing, as per the application.

There are a few observations we would like to be looked at also,

The tree, as the tree surgeons report stated, has fungus and holes called root pockets. As well as the roots the tree has dead areas and holes in the trunk, it has had remedial work done in the past as well as work following high winds damage, this according to the home owner resulted
in damage to the boundary wall of the house and repair work was carried out by H.C.D. They
were informed of this by their next door neighbours.

Due to the condition of this very old tree, both [redacted] and myself feel there are some safety issues here and we hope they can be looked at with regards to the potential damage to property and people.
